Types of Databases

In this lesson, we will briefly recall the different types of databases.

We'll cover the following ⌃

- Different types of databases

Different types of databases#

There are numerous different types of databases available to the application developers, catering to specific use cases.

Such as the:

- Document-oriented database
- Key-value datastore
- Wide-column database
- Relational database
- Graph database
- Time-series database
- Databases dedicated to mobile apps

In the *polyglot persistence* lesson, we went through the need for different types of databases. In the previous lesson, we also covered relational databases in-depth and discussed when to pick a relational one.

Now, we will have insights into the other remaining types of databases and the use cases that fit them.

So, without any further ado, let's get on with it.
